## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 33. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: 22. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

Claim 54 is objected to because it includes reference characters which are not enclosed within parentheses.

Reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m).

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2881

Claims 43 and 58-60 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 43 recites the broad recitation Figures 3, and the claim also recites 3a which is the narrower statement of the range/limitation, claim 58 recites the broad recitation 210-230 mm, and the claim also recites 210 mm which is the narrower statement of the range/limitation, claim 59 recites the broad recitation 170-200 mm, and the claim also recites 184 mm which is the narrower statement of the range/limitation, and claim 60 recites the broad recitation 205-235 mm, and the claim also recites 220 mm which is the narrower statement of the range/limitation.

***Allowable Subject Matter***

Claims 31-42, 44-53 and 55-57 are allowed.

Art Unit: 2881

The following is an examiner's statement of reasons for allowance: As the claimed invention was read in light of the specification, the prior art of record fails to disclose or render obvious a rectangular frame system with one to two discoid radiation filters for filtering the spectrum of a tanning radiator, with an upper plate, a lower plate and two to three marginal members wherein two marginal members lie opposite one another and the join the upper plate to the lower plate the upper plate having a first opening whose perimeter describes a circle, an ellipse, a rectangle or a polygon, and the lower plate has a rectangular second opening, the second opening having a greater area than the first opening, and on the two oppositely lying marginal members, which border on the side of the frame system at which no marginal member is provided, at least two double spring clips are arranged such that between the lower plate and the double spring clips a first radiation filter is clamped.

The closest prior art, Wolff (4,194,125), Kratz (4,623,796), Kerschgens (4,560,883), and Sellmeier et al. (DE 2941467) teach a rectangular frame system with one to two discoid radiation filters and plates, but they do not teach a double spring clipping means or the desired shape and size of the openings.
